Assumptions and open questions 4

BrightCart is an online shop for independent makers. This guide shows shoppers how to find a product and pay for it.

Getting started

Open BrightCart in any modern browser. The production address isn't recorded in the repository ASSUMPTION. You don't need an account to browse.

Tasks

Browse products

1. Open the home page. The heading reads **Fresh from the makers**.
2. Each product appears as a card with its name and price, for example **Ceramic mug, $24**.

> **TIP**
> Product cards show the price in dollars (`src/components/ProductCard.tsx`).

Pay for your order

1. Go to the **checkout** page (`/checkout`).
2. Select **Pay now**.

> **WARNING**
> In this version, **Pay now** does not start a payment yet. The button has no action attached (`src/pages/Checkout.tsx`), so no money is taken.

Account and settings

BrightCart has no sign-in, profile or settings pages in this version.

Troubleshooting

Problem	What to do
The page is blank after refreshing	Reload the home page. The site serves every address from the same page (`vercel.json`)
Checkout shows an error in the browser console	The payment key is missing; contact the BrightCart team
